Folks

I have just returned from a trip from Coober Pedy some 900 kilometres to travel. The heat was excessive it ranged from 40 degrees Celsius (104 degrees Fahrenheit) to 44 degrees Celsius (111 degrees Fahrenheit). There was very little opal in the whole town. It's been a very bad years for miners and the fact that there are so very few miners doesn't help.

I did secure this magnificent part opal belemnite (squid/pipe) that had been polished, it weighs 11.91cts and is absolutely gorgeous, I can sell it for only \$2,400. It has a rolling flash that runs from the bottom of the stone right through to the top and if you invert it the colour runs the other way. It is loaded with the most beautiful reds, golds and blues and just looks like a rainbow. It is 26mm long with a diameter of 11mm at the top of the stone where there is the natural hole that proves that it is a belemnite. This stone remained in my hands for up to two hours, I'd slip it back in my pocket then back in my hand, the sun was out as you can imagine with that heat and I just kept rolling the brilliant red colour from the bottom of the stone right up the whole 26mm to the top of the stone.

I have a belemnite pendant that I wear that intrigues everybody, this will do the same for you but get back to us quickly because this is one of a kind, not to be replaced. It could still reach you before Christmas if you buy it today.

I also found some Coober Pedy material that I'm going to put on special for only \$99/oz, below are three images that give you a preview. There are only 25oz so if you want some jump in and tell us how many today but please limit yourself to 4oz or there won't be enough to share around for all our many clients and I don't like disappointing you.

Merry Christmas

Murray
