Hi Folks

The belemnite as you can see from the images below showing beautiful reds and greens, is 51mm long with a diameter of 10mm and weighs 32.2cts so it is only \$31.05/ct. Why is it so inexpensive? Well there are a couple of small imperfections that only an opal person would notice. The gem opal is interspersed with a bit of potch which doesn't really detract from the stone. You could make a beautiful pendant for either a male or a female.

I can highly recommend it at only \$1,000.

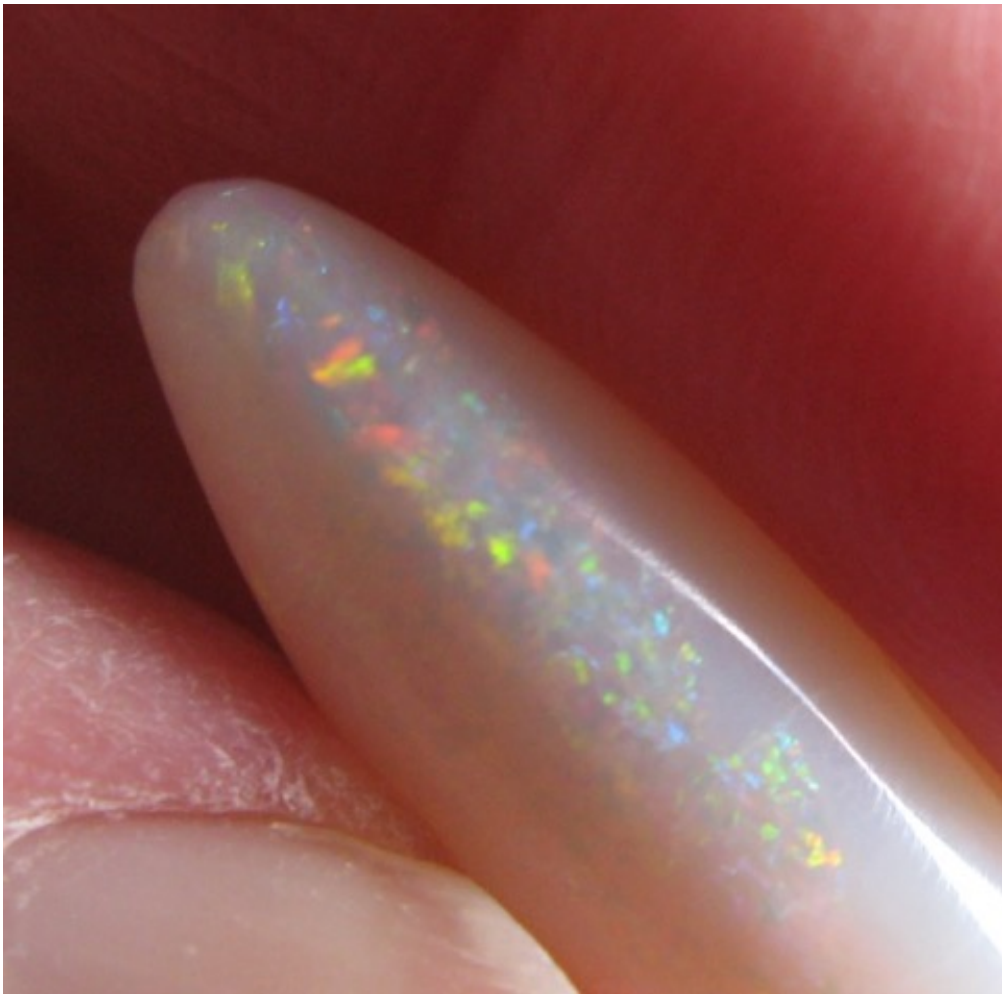

Good luck to the purchaser.

Murray
